KEF INTRODUCES NEW CUSTOM INSTALLATION SPEAKER Ci130.2 Replaces Acclaimed Ci130 with Significant Upgrades

Intended to be as unobtrusive as possible, the Ci Series Ci130.2QS and Ci130.2QR are high-fidelity flush-mount loudspeakers utilising KEF's Uni-Q® driver array technology. This gives the round and square bezel speakers the inherent smooth dispersion characteristics to fill any normal room with an expansive, generous and rich sound stage.

Equally at home - the square speaker in the wall or round speaker in the ceiling – the driver array is mounted into a moulded ABS baffle and can be easily and quickly installed with the moisture-resistant bracket and fixings allowing placement in the harshest environments, such as bathrooms or even outside (under eaves).

Features and Benefits:

The Ci130.2QS and Ci130.2QR combine 50W power handling and 86dB sensitivity. A 130mm (5.14") bass/mid driver giving good bass extension along with a 19mm (0.75") aluminium dome tweeter provides excellent power handling and smooth response. The bezel

and grille can be painted or covered by fabric to match the interior décor.

Suggested Retail Prices (including VAT): From around £100.00 each.

See Specifications attached. High-resolution images available.
